CallNet
VoIP for Business

enterprise**networking** TOP 10
VoIP 

No extra charge for additional auto attendants, Ring Groups, Greetings, and any of the rest of the standard features you need to run your business!

**DON'T COMPROMISE -
COMPARE**

The demand for affordable, feature rich VoIP phone systems is not becoming the future, it is here. CallNet provides cost effective VoIP services that deliver collaboration and mobility features that traditional phone services and systems simply cannot do. CallNet saves your business on phone costs while improving customer satisfaction and employee productivity with features such as voicemail to email, cell phone integration, and call groups, just to name a few.

The Advantages Of Callnet

Being from the industry, we know what clients really want and need from their telecommunications system! The lower cost and features offered by VoIP can make a positive impact not only to your bottom line but also to your customer's experience with your company. CallNet is powerful enough for the largest company and flexible enough for the SMB.

A PROFESSIONAL PRESENCE

Whether your company is 5 or 500 employees, CallNet allows your image to be second to none with the features and functionalities that come standard!

With 100% customization we will ensure each and every customers call is answered/routed in the timeliest, efficient manner and that each phone has the features that the end user needs.

INCREASED BOTTOM LINE

Don't miss out or get stuck with outdated technology or a pricey upgrade when new features are available. With CallNet there are no large capital investments for onsite systems. You get the big business benefits of leading technology, automatically upgraded as technology changes, without the headache and the expense of hiring technicians or any maintenance contracts to pay. CallNet comes with unlimited local and long distance calling.

FUTURE PROOF YOUR COMMUNICATION SOLUTIONS

With CallNet Hosted VoIP, you get the benefits of outsourcing the management of your phone system all while removing maintenance, repair and future replacement costs. With a Hosted VoIP solution, you save from day one when comparing to replacement costs and your monthly communication service fees (traditional phone lines) plus don't forget the service call fees, maintenance, etc.

CAPEX vs OPEX

With Hosted VoIP, there are no large servers or systems to purchase. Other than phones, there are no capital expenditures to depreciate over time. Which means it comes off of your books. All you have is an affordable monthly service fee that connects your business and employees to a host of capabilities that dramatically improve productivity.

Who is paying who? No online tutorials to watch or guides to read to set up your system. We will do it for you or show you if you would like to know how FREE EVERYTIME.

LET'S ASSUME SOME WORST-CASE SCENARIOS

Your building is flooded. Or a storm wreaks havoc. Or a fire knocks out power for miles around. Now, let's assume you have CallNet. Want to know how things would be? Business would go on uninterrupted. Since no physical box resides on your premises, it resides in redundant and secure data centers. Customers can still connect with your business because employees can work from anywhere. The reason? An automatic failover setting to predetermined cell or cell phones when your device is not online. It's an incredibly fast and easy way to take control of a disastrous situation and ensure that anything major becomes just a minor incident.

Can or will other companies send tech support onsite – and it be free? Do you have time to waste troubleshooting on the phone with remote tech support if it takes longer than 10 minutes?

**DON'T
COMPROMISE –
COMPARE**

EVEN IF YOU WANT TO EASE INTO TECHNOLOGY

Once you see all of the advanced features and functionality that are available from CallNet, you'll be seriously impressed by the impact it can have on your business. And the best part is you can activate only those features that you need to make your company more productive. It starts with HD voice, the clearest a business call can get. That's just scratching the surface. Through CallNet, you can have voicemails automatically forwarded to your email account, you can make a call from a cell phone or remote office and have it appear as a call from the main office. Transfer calls out to cell phones without worrying about tying up your phone lines. You also have the ability to integrate with Outlook or your Customer Relationship Management system.

Basically, there isn't much you can't do with CallNet.

CallNet's technical staff are also network engineers, so when others tell you that it is not their service's issue, while that is comforting, you still need it resolved! That's where we are different from others. We will give the information that needs to be given to whom ever and if you want us to we have the ability to fix it for you remote OR onsite.

VIDEO CONFERENCING AND COLLABORATION

Video conferencing and collaboration is the perfect solution for moving business forward while cutting back on costs. Facial expressions, gestures, eye contact—they all make communications far more personal and ultimately, more productive. Video calling, screen sharing, file transfers, etc. significantly increases the quality of communications. With VMeeting, it's easy to get started, and so simple to use. As you'll see, there is nothing quite as compelling as being able to see the people who matter to your business.

SMS on CallNet

SMS for Business, lets you conveniently send and receive text messages on your business phone number rather than your personal number!

Provide quick updates to your customers, confirm appointments, and reply back using the same recognizable number you take business calls on. All from either our mobile or desktop app.

SMS messages are stored for auditing for up to 6 weeks.

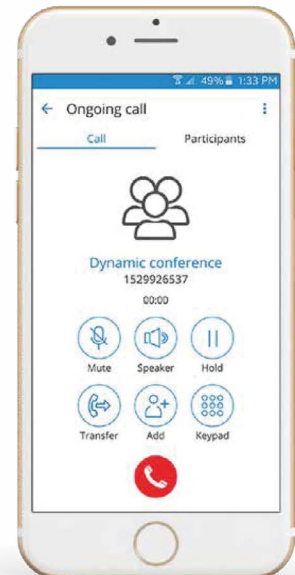

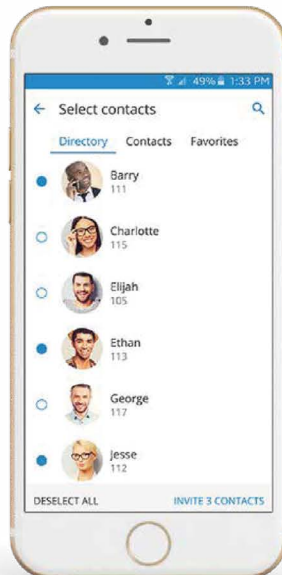

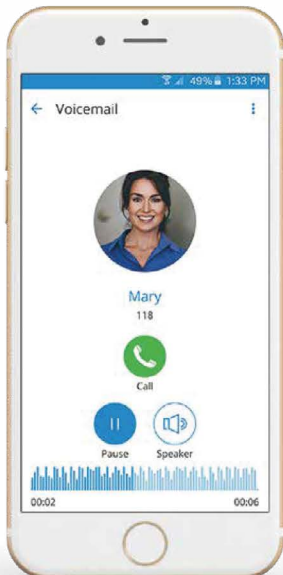

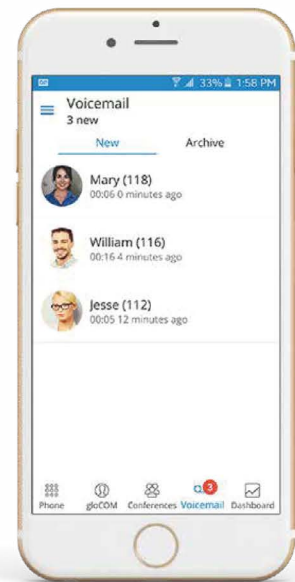

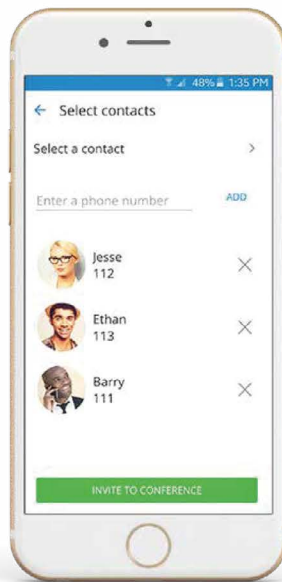

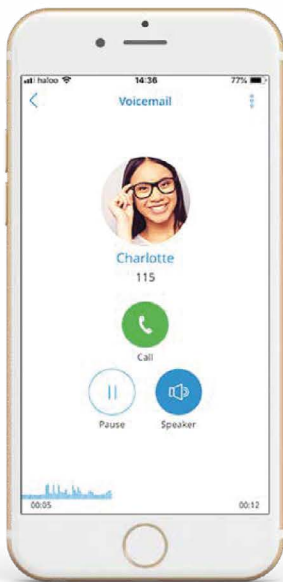

Protect your greatest asset- your client! How many clients have a former employee's cell phone that now works for a competitor or perhaps its just a matter of customer service. Every outbound call from road workers appear to come from your office, thus protecting the integrity of your business relationships no matter what the reason.
